

EPD IT Production Data Flows Overview

EPD IT data flows

- 1) IAIP Airbranch_db to ICIS-Air through NETWORKNODEFLOW to EPA CDX via VES
- 2) EIS to EPA through NETWORKNODEFLOW DB to EPA CDX via VES. Air Branch users of ENSC website can request ad hoc.
- 3) GEOS to IAIP Airbranch_db through MFL_GA_STG
- 4) GEOS to GAPDES through MFL_GA_STG (Construction SW, Industrial SW, Municipal WW, soon Industrial WW)
- 5) GAPDES to FIS through MFL_GA_STG (Industrial SW, Municipal WW, Industrial WW)
- 6) IAIP Airbranch_db to FIS through MFL_GA_STG
- 7) SDWIS to FIMS through MFL_GA_STG
- 8) GOMAS to WQX through Windsor .NET OpenNode2 in CMS
- 9) Beaches annual flow (DNR Coastal Resources Division – once per year, try for end of February)
 - a. EPA WQX flow (Oracle water quality data in 'Beach' DB managed by CRD)
 - b. EPA Notification flow (Oracle notification data in 'Beach' DB managed by CRD, generally few records for a given year)

Flows outside of EPD

- 1) GAPDES to ICIS (through Java OpenNode2 in Windsor AWS)
- 2) ICIS to ECHO (all inside EPA)
- 3) Ambient Air data flow – Agilaire AirVision to EPA AQS

Key notes

- 1) enfoTech services for FIS and GEOS transfers run on .134 CMS web server reading from and writing to the MFL_GA_STG database
- 2) Windsor services for GAPDES transfers run using the Windsor-provided .NET OpenNode 2 on the .134 CMS web server
- 3) EPA Air flows run using the VES/CDX connector on the .134 CMS web server
- 4) Flow to EPA WQX from GOMAS occurs using the Windsor-provided .NET OpenNode 2 on the .134 CMS web server
